Equalizer Synopsis

Equalizer is an X_TRADER® Pro plug-in application that allows a trader to view and enter orders for multiple contracts in one window. Equalizer displays market depth horizontally, maximizing the amount of information that can be displayed on a screen and minimizing the time needed to place an order. Equalizer is ideal for trading STIR products such as the Eurodollar or Euribor because it is easy to compare the movements in the market between the different contract months. Equalizer supports the entry of Limit, Market, Stop Limit, Stop Market and OrCA (Order-Cancels-All) orders.

Key Features

- Quickly view and trade many contracts
- Display and re-center prices around Net Change to “draw the curve”
- Drag and drop orders from one contract to another
- Organize contract groups onto different tabs with spacers in between
- Enter OrCA orders made up of many orders across various contracts; when one gets filled or cancelled all other linked orders will be cancelled
- Enter virtual limit and stop orders held locally on the client machine until triggered by a price and quantity threshold
- Display a Quantity Indicator to view trends in the bid and offer quantities
- Two viewing modes: Depth view, which displays horizontal depth, and Standard view, which is similar to a Market Grid with a pop-up vertical depth window
- Dynamically update the right-click quantity through a spreadsheet link or default it to Net Position
