PS Trader Synopsis

PS Trader is designed to allow a trader to submit "entry-style" OCO (One-Cancels-Other) orders with trailing stops through a custom user interface. This X_TRADER® plug-in application enables the trader to submit market, limit, stop market, stop limit and OCO orders with the option to have the stops trail.

Key Features

- Features an MD Trader®-style grid complete with similar functionality
- Enter OCO orders made up of either two stop orders, two limit orders or a stop order and a limit order; in all cases, the stop orders can be trailing stops
- Enter stop market and stop limit orders with the option of a stop limit offset and/or a trailing stop
- Enter virtual stops, held locally on the client machine until triggered
- Order Pane to view and update details of all orders at a price level
- Hovering over an OCO order highlights the two linked orders
- Status bar displays last user actions
- Smart Delete functionality deletes orders closest to the market first
- Quantity Pad in discrete or detached mode optimizes screen real estate
- Ability to display as little as one row without the addition of scrollbars

Contract	Qty	Chg	Price	Stop Price	TO	Acct#	Type	Time Stamp	Del
ZF Dec05	10		113140	113125	5	1111	Stop L	1:01:45 PM	X
ZF Dec05	10		113125			1111	Limit	11:32:43 AM	X
ZF Dec05	10			113125	NA	1111	Stop M	Not In Market	X

The screenshot shows the PS Trader interface with a grid of orders and a control panel. The grid displays columns for Contract, Qty, Chg, Price, Stop Price, TO, Acct#, Type, Time Stamp, and Del. The control panel includes a quantity pad with buttons for 1, 5, 10, 20, 50, and 100, a 'Clear' button, and checkboxes for 'Set as Default', 'Limit Mkt', 'Stop OCO', 'Stop Lmt', 'SLQ', 'Trail', and 'Vir. Stop'. The status bar at the bottom indicates 'OCO Mode CHANGE - Sell: 10 ZF @ 11307'.

Requirements: X_TRADER
 X_TRADER API

Suitable Market: Brokers, Buy-Side Clients and Traders
